

**PIPELINES
DELIVER**

YOUR MODERN LIFE

Pipelines deliver healthcare for you.

Pipelines travel the country, underground and out of the way. They deliver raw materials that are manufactured into the products that make modern healthcare possible, including life-saving equipment, medicine, and more.

Raw Materials that Become Healthcare Products

Pipelines deliver raw materials to manufacturers and factories to make items essential for basic modern healthcare.

Healthcare Supplies

Protective equipment, medical tubes, disinfectants and cleaners, adhesives, and some bandages and medicines are all petroleum-based products that rely on delivery by pipeline.

Medical Devices and Electronics

High-tech devices such as ventilators, MRI machines and CT scanners contain components made from raw materials delivered by pipeline.

Fueling Healthcare

Whether its fuel for ambulances or generators for hospitals, healthcare requires fuel delivered by pipeline.
