

Pipelines Deliver the Fuel You Need

Pipelines are how we deliver energy from where it is produced to where it is turned into useful products and then on to where it fuels our lives.

Energy Production

Pipelines gather and deliver energy from where it is produced.

Refineries

Pipelines deliver crude oil to refineries that make gasoline, diesel and jet fuel.

Regional Storage & Delivery

Pipelines deliver newly made fuels to our local regions where trucks can pick it up for delivery to each neighborhood.

Local Delivery

Tanker trucks finish the journey begun by pipelines by delivering fuels to each local gas station.

Gas Stations

That fuel you pump into your car or truck at the gas station traveled at some point by pipeline.
