

# PIPELINES PROMOTE ENERGY SECURITY

A SECURE AMERICA DEPENDS UPON SECURE ENERGY

Abundant and reliable energy delivered by pipeline makes America safer. Liquids pipelines perform the vital role of delivering U.S. produced energy to American consumers. The additional U.S. crude oil production we need to increase American energy security and supplies will flow by pipeline.

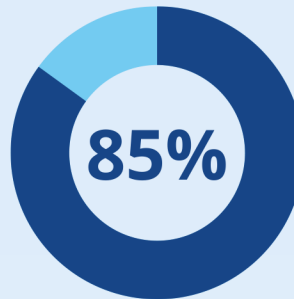

America has the energy supplies and infrastructure to achieve energy security and protect its citizens from higher energy costs.

American families save over **\$200 billion annually** in energy costs thanks to increased natural gas and oil production delivered by pipelines.

**\$2,500 IN SAVINGS  
PER FAMILY**

## GLOBAL DEMAND FOR OIL AND NATURAL GAS IS PROJECTED TO INCREASE IN THE YEARS AHEAD

The world's population is expected to grow 20% by 2050, when oil and natural gas are projected to remain the leading energy sources.

**85% OF AMERICANS  
WANT RELIABLE US  
ENERGY, NOT  
FOREIGN IMPORTS**

U.S. energy exports support America's allies. When our friends in Europe needed us, American energy provided energy security and national security.
