

# PIPELINES TRAVEL UNDERGROUND TO BRING YOU ENERGY

Pipelines delivering energy for your car, home, farm or business travel underground.

## OUT OF THE WAY

Routing pipelines underground is a convenient way for them to make their deliveries without getting in the way.

## UNDISTURBED LANDS

Grass, plants and wildlife flourish right on top of pipelines. Roads cross them. And so do you, almost every day.

## RURAL AMERICA

Pipelines delivering propane to rural America travel under pastures and cropland. Farmers can grow their row crops right on top.

## BEANEATH WATERBODIES

Pipelines can travel safely far beneath streams, rivers and other bodies of water by tunneling deep below them.

## HORIZONTAL DIRECTIONAL DRILLING

Pipeline builders can use horizontal directional drilling to install a pipeline by tunneling deep beneath a waterway and then pulling an assembled section of pipe through the tunnel.

Our pipeline network helps you get *where you need to go.*
